

Cloud IAM: Qwik Start - LAB

GSP064

Overview

Google Cloud's Identity and Access Management (IAM) service lets you create and manage permissions for Google Cloud resources. Cloud IAM unifies access control for Google Cloud services into a single system and provides a consistent set of operations.

In this lab, you sign in with 2 different sets of credentials to experience how granting and revoking permissions works from Google Cloud Project Owner and Viewer roles.

What you'll learn

- Assign a role to a second user
- Remove assigned roles associated with Cloud IAM

Prerequisites

This is an **introductory level** lab. Little to no prior knowledge of Cloud IAM is expected. Experience with Cloud Storage is helpful to complete the tasks in this lab, but is not required. Make sure that you have a file in .txt or .html available. If you are looking for more advanced practice with Cloud IAM, be sure to check out the following Google Cloud Skills Boost lab, [IAM Custom Roles](#).

Q

qwiklabs-gcp-00-815c355i

Student Resources

Task 1. Explore the IAM console and project level roles

1. Return to the **Username 1** Cloud Console page.

2. Select **Navigation menu > IAM & Admin > IAM**. You are now in the "IAM & Admin" console.

3. Click **+GRANT ACCESS** button at the top of the page.

4. Scroll down to **Basic** in Select a role section and mouse over.

There are three roles:

• Editor

• Owner

• Viewer

These are *primitive roles* in Google Cloud. Primitive roles set project-level permissions and unless otherwise specified, they control access and management to all Google Cloud services.

Lab instructions and tasks

0/100

GSP064

Overview

Setup and requirements

Task 1. Explore the IAM console and project level roles

Task 2. Prepare a Cloud Storage bucket for access testing

Task 3. Remove project access

Task 4. Add Cloud Storage permissions

Congratulations!

Explore the editor role

Now switch to the **Username 2** console.

1. Navigate to the IAM & Admin console, select **Navigation menu > IAM & Admin > IAM**.
2. Search through the table to find Username 1 and Username 2 and examine the roles they are granted. The Username 1 and Username 2 roles are listed inline and to the right of each user.

You should see:

- Username 2 has the "Viewer" role granted to it.
- The **+GRANT ACCESS** button at the top is grayed out—if you try to click on it you get the message, "You need permissions for this action. Required permission(s): resource manager.projects.setIamPolicy".

This is one example of how IAM roles affect what you can and cannot do in Google Cloud.

3. Switch back to the **Username 1** console for the next step.

Assessment Completed!

Verify project viewer access

1. Switch to the **Username 2** console.

2. From the Console, select **Navigation menu > Cloud Storage > Buckets**. Verify that this user can see the bucket.

Username 2 has the "Viewer" role prescribed which allows them read-only actions that do not affect state. This example illustrates this feature—they can view Cloud Storage buckets and files that are hosted in the Google Cloud project that they've been granted access to.

Task 3. Remove project access

Switch to the **Username 1** console.

6. Click **SAVE**.

Verify access

1. Switch to the **Username 2** console. You'll still be on the Storage page.

Username 2 doesn't have the Project Viewer role, so that user can't see the project or any of its resources in the Console. However, this user has specific access to Cloud Storage, the Storage Object Viewer role - check it out now.

2. Click **Activate Cloud Shell** to open the Cloud Shell command line. If prompted click **Continue**.

3. Open up a Cloud Shell session and then enter in the following command, replace `[YOUR_BUCKET_NAME]` with the name of the bucket you created earlier:

gsutil ls gs://[YOUR_BUCKET_NAME]

You should receive a similar output:

gs://[YOUR_BUCKET_NAME]/sample.txt
